Acknowledge

As we understand it, this project serves as a step-by-step learning environment that bridges the gap between classroom theory and real-world implementation. It offers a hands-on experience that allows us to:

- Practice through a structured, "laddered" learning approach.
- Develop larger and more resilient applications.
- Implement specific utilities within user-designed software.
- Transition from single programs to a unified, complete program.
- Learn how to apply technical concepts in a phased manner.
- Enhance our professional skills and provide added value.
- Gain experience by working on authentic, real-life projects.
- Tackle complex scenarios to create more useful applications.
- Access professional mentoring through email support.

We would like to extend our deepest gratitude to our professor, Mr. Le Thanh Nhan, and our fellow students for their wonderful support during this project. Despite the various challenges and mistakes we encountered, we look forward to more opportunities to expand our knowledge within the web development industry. We also sincerely thank you for the resources and the "demo" project from India APTECH, which provided us with invaluable real-world experience. Having grown through this process, we remain committed to continuous learning as we strive for future success.

Yours Sincerely,

Team Group 04

Synopsis

The objective of this project is to develop a Spa Management System that simulates real-life business operations in a spa environment. This application helps students understand how to design and build a practical system using programming technologies such as PHP and MySQL. The main purpose of this project is not only to apply front-end and back-end knowledge but also to provide a real-world scenario where users can interact with the system. Through this project, students can enhance their skills in developing basic web applications and managing data effectively. This project is designed for students who have completed fundamental modules and want to apply their knowledge in a real-life application. It allows students to practice problem-solving, system design, and implementation during lab sessions with the guidance of instructors if necessary. The system developed in this project focuses on managing spa services, customer information, appointment scheduling, and payment processing. It provides a user-friendly interface for both customers and administrators to interact with the system efficiently. By completing this project, students will gain a clear understanding of how a real-world application works. It also helps improve confidence in handling practical tasks and preparing for future professional work in the IT field.

Review 01

Design Plan:	Document Name: Problem Definition	SWD/Form No.01/PD/Ver1.0
Effective Date: 10/04/2026	Version 1.0	Page No: 1 of 45

Problem Definition

The beauty and wellness industry are experiencing rapid growth, with increasing demand for high-quality salon services such as hairstyle, skincare, and spa treatments. However, many salons still face operational challenges, including inefficient appointment scheduling, manual record-keeping, and difficulty in managing staff and inventory. These issues not only reduce business efficiency but also impact the overall customer experience.

To address these challenges, the Zen Style has been designed as a comprehensive, user friendly solution that integrates all aspects of salon operations into a single digital platform. By automating routine tasks, providing real-time access to client and staff information, and ensuring seamless payment and invoicing, the system enables salons to focus on delivering superior service quality while improving profitability.

Effective Date: 10/04/2026	Version 1.0	Page No: 2 of 45

Customer Requirements Specifications

I. CRS/Requirements Specifications

Client/Project Undertaken:		
1.	List of inputs to the system	
		- Service search keywords (e.g., hairstyling, skincare)
		- Client registration details (name, phone, email, DOB)
		- Client login credentials (username/phone/email and password)
		- Appointment date and time slot selection
		- Stylist preference selection
		- Service booking request details
		- Profile update information (including preferences/allergies)
		- Appointment rescheduling/cancellation requests
		- Service/staff feedback and ratings (1-5 stars, comments)
2.	List of outputs expected from the system	
		- Home Page interface with service showcases and promotions
		- Search results showing available services and time slots
		- Automated appointment confirmation message (email/SMS)
		- Appointment reminders (24h and 2h prior)
		- Client service history view
		- Updated client profile/loyalty points status
		- Invoice/payment receipt
		- Sitemaps and navigation menus
3.	Overview of processes involved in the system	
		- Client registers and logs into the secure system
		- Client browses services, offers, and checks staff availability
		- Client selects service(s), preferred stylist, and an open time slot
		- System confirms the booking and prevents double-booking
		- System sends automated reminders to the client
		- Client manages appointments (views history, reschedules, or cancels)
		- Client updates personal preferences and reviews service history
		- Client submits feedback after service completion

Admin/Project Undertaken:		
1.	List of inputs to the system	
		- Admin/Receptionist/Stylist login credentials
	Prepared by (student) Project Group No: 04	Approved by (Faculty) LE THANH NHAN
Signature		
Date		

Design Plan:	Document Name: Customer Requirements Specifications	SWD/Form No.02/CRS-BVer1.0
Effective Date: 10/04/2026	Version 1.0	Page No: 3 of 45

		- New staff profile details (personal, roles, contact)
		- Staff work schedules and availability
		- New inventory items and supplier details - Inventory stock level updates/purchase order data - New service offerings and pricing updates - Seasonal packages, loyalty discounts, and festive deals - Manual appointment booking/modification requests - Attendance and working hours data - Report parameters (date ranges for daily, weekly, monthly, annual)
2.	List of outputs expected from the system	
		- Admin dashboard overview (appointments, recent sales)
		- Secured staff access with role-specific permissions
		- Updated staff schedules and payroll data
		- Master list of clients and service history - Inventory reports (monthly usage, wastage, low-stock alerts) - Generated sales reports and service trend analysis - Calendar view of all bookings (day/week/month) - Client feedback reports for admin review - Automated alerts (low inventory, pending invoices, upcoming shifts)
3.	Overview of processes involved in the system	
		- Admin/staff logs in securely - System tracks inventory levels and generates low-stock alerts - Receptionist/Admin manually books or modifies appointments - Receptionist assigns services to staff during bookings - System tracks attendance and hours for payroll processing - Admin views detailed financial, sales, and inventory usage reports - Admin reviews client feedback to monitor service quality
		- Admin manages salon operations: staff scheduling, inventory, services
		- Admin creates and manages user accounts and permissions
		- System tracks inventory levels and generates low-stock alerts - Receptionist/Admin manually books or modifies appointments - Receptionist assigns services to staff during bookings

II. CRS/Customer Acceptance Criteria

Sinh viên dùng cấu trúc để mô tả sau:

Given [precondition] **when** [action] **then** [result]

S.No	Customer's Acceptance Criteria
1	Given the customer is on the homepage,when the customer searches for spa services, then the system displays a list of available services.
2	Given the customer is viewing a service,when the customer selects date and time and books, then the system creates an appointment and shows confirmation.
3	Given the customer has an appointment,when the customer cancels it, then the system updates the status to cancelled.
4	Given a customer registers an account, when the admin approves it, then the account becomes active and can log in.
5	Given the customer is logged in, when updating personal information, then the system saves and display updated information.
6	Given available time slots exist, when a customer books one slot, the the system marks it as booked and prevents double booking.
7	Given the admin is logged in,when managing bookings, then the system updates booking information correctly.
8	Given the admin updates service information, when changes are saver, then the system displays updated services.
9	Given a user enters correct login credentials, when clicking login, then the system grants access.
10	Given the system contains data, when the user searches of filters, then the system returns correct results.

III. Project Plan

1. Project Details	
-	Name of the Client:
	ZenStyle
-	Date of Project Plan:
	April, 2026
-	Project Vision/Objectives:
	To create a serene, high-end web platform that allows clients to book spa treatments (massages, facials, etc.) and purchase wellness products online. The project aims to provide a relaxing digital experience with secure booking and a smooth checkout process for physical goods.
-	Scope:
	Includes customer registration, spa service catalog with online booking/scheduling, an e-commerce shop for spa products (skincare, oils), shopping cart and checkout, appointment notifications, and an admin dashboard to manage appointments and product inventory. The current scope does not include video consultations or live chat support.
-	Our understanding of the client organization:
-	Project Organization with Responsibilities and Authorities:
	Project Manager / System Analyst: Coordinates requirements, prepares project documentation, and manages the delivery timeline. Front end Developer: Designs a minimalist, calming UI; implements responsive layouts for the service menu and product gallery. Back end Developer: Develops the booking logic, authentication systems, and product management APIs. Database Designer / QA Member: Designs the database for appointments and

	inventory; executes functional and usability testing.
-	
-	
2. Project Initiation/Requirement Documents	
	ZenStyle Business Requirements and User Stories
	UI/UX Design Mockups (Figma/Adobe XD)
	Database Schema and Data Flow Diagrams (DFDs)
3. Deliverables	
	Completed ZenStyle Web Application (Frontend and Backend)
	Documentation including Design Specifications and User Manual
	Database scripts for services and product inventory
	Deployment files and README documentation
	Video walk through of the booking and shopping features
4. Project Dependencies	
	Access to development environments (Local/Cloud)
	Reliable internet for team collaboration and testing
	Timely approval of design wireframes
	Functional version control repository (GitHub)
5. Major Project Milestones	
	Requirement analysis and UI design phase completed
	Database and backend environment setup
	Service booking and product catalog modules functional
	Shopping cart and user profile integration
	System-wide testing and bug resolution
	Final deployment and project handover
6. Quality Plan	
-	Review Activities:
	Review of the booking workflow for ease of use
	Peer review of HTML/CSS for responsiveness and accessibility
	Verification of database relationships (Services vs. Products)

	Prepared by (student) Project Group No: 04	Approved by (Faculty) LE THANH NHAN

Date		

Design Plan:	Document Name: Customer Requirements Specifications	SWD/Form No.02/CRS-BVer1.0
Effective Date: 10/04/2026	Version 1.0	Page No: 9 of 45

-	Testing Activities:
	Functional testing of appointment scheduling and "Add to Cart" features Usability testing to ensure the interface is intuitive and calming Security testing for user login and data protection Compatibility testing across various mobile and desktop browsers
-	Backup and recovery strategies:
	Maintain source code backup using Git/GitHub Create regular database backups in SQL format
	Keep local and cloud backup copies of project documents and media files
	Maintain version history for source code and documentation changes

Sr.No	Features Tested	Remarks
1	Does the system reject passwords that lack a minimum of 8 characters, an uppercase letter, or a special character?	
2	Can a user successfully log in using all three methods: Username, Phone, and Email?	
3	Is the "Financial Reports" module strictly hidden or inaccessible to Stylists and Receptionists?	
4	Are clients able to see real-time available time slots for specific salon services?	
5	Does the system trigger an automated confirmation message immediately after an appointment is booked?	
6	Does the "Calendar View" correctly toggle between Day, Week, and Month layouts without errors?	
7	Does the system display an error message if a user attempts to book a staff member for two overlapping appointments?	
8	Is the client database searchable by Appointment ID, Name, or Phone Number with accurate results?	
9	Can the system store and retrieve specific client preferences like allergies or preferred stylists?	
10	Does a "Low-stock" alert appear on the dashboard when inventory items fall below the predefined threshold?	
11	Is the Admin able to generate and save Purchase Orders with full supplier details?	
12	Does the system accurately track and display the attendance and total working hours for each staff member?	
13	Are the Daily, Weekly, and Monthly sales reports generating the correct numerical data?	
14	Do the appointment reminders sent at the 24-hour and 2-hour marks contain the correct booking details?	
15	Is the Google Maps integration on the "Contact Us" page interactive and pointing to the correct salon address?

Final checklist

Sr.No	Aspected Tested	Suggestion/ Remarks
1	Are all the users able to view the images and links?	
2	Have all the views, modules and controllers been properly integrated and is the site function as a single page application?	
3	Are the GUI content devoid of spelling mistakes?	
4	Is the application user-friendly?	
5	Is the Website launching correctly in all popular browsers?	
6	Are all the forms validated with proper criteria?	
7	Do all text links lead to the appropriate website?	
8	Do all image links lead to the appropriate website?	
9	Are all the images and links clearly visible on the page?	
10	Does the Web page work properly in all the tested browsers?	
11	Does the Web page take too long to be loaded fully?	
12	Is the navigation sequences correct through all the Web pages on the site?	
13	Is the JavaScript code working as expected in all click events?	
14	Does the appointment management function work correctly?	
15	Are all the records properly fed into the appropriate database?	
16	Does the administrator have all the rights to create and delete the records?	
17	Have all the modules been integrated and are completely functional?
